Mr. John Doran 501 Garland Street Miles City, Montana

Dear Mr. Doran:

In order that we in Montana will be able to present facts as to the amount of land we are now irrigating, protect our water rights, and keep Montana water in Montana, the Montana State Legislature enacted a law (Section 349.68 Montana Session Laws) requiring the State Engineer to investigate and prepare a complete reduced and maps of all water rights in the state. In compliance with this law all water users in Custer County are being requested to supply information regarding their use of water, whether or not they are under a ditch company, irrigation district, or have a private water right and diversion system.

Our field party, during the summer of 1947, classified your land and mapped your irrigation facilities as shown on the enclosed form. Before we accept this survey as final there are a few questions on the enclosed form that we would like to have you answer. We are, therefore, asking you to help us by answering these questions which pertain to the land shown thereon.

The adjoining states have already compiled records of their water use in the Missouri River Basin for the protection of their water rights. It is, therefore, necessary that we do the same in Montana. To date we have completed our survey in Yellowstine, Carbon, Stillwater, and Big Horn counties, and have had 100% cooperation from all of the water users in these counties. I am certain that we can expect the same support in Custer county. As Montana is the only western state which has not provided by statute for a centralized state control over the appropriation and the administration of water, we in Montana must be vigilent and do everything possible to protect the rights we have against outside infringement. These rights have been challenged by interests outside the State of Montana, particularly the navigation interests of down stream states and also the water users in neighboring states through which our interstate streams flow. In order to protect our water rights we must have a record of them and of their present uses. We feel that the only way we can obtain this information

Page Two

accurately is by a field survey and from the water users or the man that is on the land. We have been working for the past eight months in Custer County checking farm by farm. The results of this survey are shown on the map on the enclosed form. In order to have a further check we want you to verify our classification of the land you irrigate and of the land we have shown as potential irrigable land. If there is any information that we have compiled on this form which is not correct we would like to have you change it. We also are depending on you to fill in the questions on this form and mail it to us in the self-addressed envelope at your earliest possible convenience so that we will have the necessary information needed in case of litigation here in the State Engineer's Office to protect your water right.

In order to facilitate this work a branch office of the State Engineer has been established in Billings and is located in the Roosevelt School Building on 23rd Street and 4th Avenue North. If there is anything that is not clear, or if you should seek further information we would appreciate your calling on us.

Very truly yours.

Gerald J. Oravetz Assistant State Engineer

GJO/a

P. S. These forms are the property of the State of Montana and must be returned to the State Engineer's Office in Billings.
