**Figure 6** | The effect of the number of iterations on the performance of the proposed algorithm. The figure shows the convergence of the algorithm as the number of iterations increases. The x-axis represents the number of iterations (0 to 100), and the y-axis represents the fitness value (0 to 1). The legend indicates three different parameters:  $\alpha$ ,  $\beta$ , and  $\gamma$ . The curves show that the fitness value increases rapidly in the initial iterations and then stabilizes after approximately 50 iterations.
