1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

1. The first group of variables, *demographics*, includes age, sex, marital status, and education. The second group, *employment*, includes employment status, occupation, and industry. The third group, *income*, includes household income and personal income. The fourth group, *housing*, includes home ownership, home value, and home age. The fifth group, *transportation*, includes car ownership and car age. The sixth group, *leisure*, includes leisure time and leisure activities. The seventh group, *health*, includes health status and health insurance. The eighth group, *social*, includes social network and social support. The ninth group, *environment*, includes environmental quality and environmental concern. The tenth group, *quality of life*, includes life satisfaction and quality of life index.

Figure 6 | The effect of the number of iterations on the performance of the proposed algorithm. The figure shows the convergence of the algorithm as the number of iterations increases. The x-axis represents the number of iterations (0 to 100), and the y-axis represents the fitness value (0 to 1). The legend indicates three different parameters: α , β , and γ . The α parameter (blue line) starts at approximately 0.8 and converges to 1.0. The β parameter (orange line) starts at approximately 0.6 and converges to 1.0. The γ parameter (green line) starts at approximately 0.4 and converges to 1.0.
