Water is delivered by:— 1. Private System; 2. Ditch Company; 3. State Project; 4. Federal Project; 5. Irrigation District.

[illegible]

NOTE: R—Denotes Regular Irrigation. F—Flood Irrigation.

Adequate Supply: Yes..... No X..... Explain.....
Remarks..... Some new work largely not tried......

1. The first step in the process of the scientific method is to ask a question. This question should be based on observation and should be specific and measurable. For example, "Does the amount of sunlight affect the growth of a plant?"

2. The second step is to form a hypothesis. A hypothesis is a statement that can be tested. It should be based on the question and should be a prediction of what will happen. For example, "If a plant receives more sunlight, then it will grow taller." This hypothesis is testable because it can be measured and compared.

3. The third step is to design an experiment. The experiment should be designed to test the hypothesis. It should include a control group and an experimental group. The control group is the group that does not receive the treatment being tested. The experimental group is the group that does receive the treatment. In this example, the control group would be plants that receive a normal amount of sunlight, and the experimental group would be plants that receive more sunlight.

4. The fourth step is to collect data. Data is the information that is gathered during the experiment. In this example, the data would be the height of the plants in both groups over a period of time.

5. The fifth step is to analyze the data. This step involves looking at the data and seeing if it supports the hypothesis. In this example, if the plants in the experimental group grew taller than the plants in the control group, then the hypothesis is supported.

6. The sixth step is to draw a conclusion. A conclusion is a statement that summarizes the results of the experiment. In this example, the conclusion would be that the amount of sunlight does affect the growth of a plant.

7. The final step is to communicate the results. This step involves sharing the results of the experiment with others. This can be done through a presentation, a paper, or a report.
