Describe means of obtaining groundwater without a well "as by sub-irrigation and other natural processes". Include depth to water when applicable. (not applicable)

Water was obtained by digging out spring, enclosing source and piping to tank at lower elevation.

Quantity of water developed and used with explanation of method used to measure or estimate such amount. If use is intermittent estimate approximate lengths of periods of use.

Quantity of water varies from 1/2 to 1 1/2 gallons per minute as timed and measured. Periods of use vary with amount of range feed available.

Location of springs shown on enclosed map of U.S. Range Livestock Experiment Station.
