have appropriated groundwater according to the Montana laws in effect prior to January 1, 1962, as follows:

2. The beneficial use on which the claim is based: Livestock Watering

3. Date or approximate date of earliest beneficial use; and how continuous the use has been: No. 1 is a natural spring and flowing as far back as appropriator can recall; No. 2 is a well drilled more than 50 years ago and continually in use

4. The amount of groundwater claimed (in miner's inches or gallons per minute) No. 1 will flow freely year around about 7 gallons per minute and No. 2 being a well will produce 10 gallons per minute

5. If used for irrigation, give the acreage and description of the lands to which water has been applied and name of the owner thereof: not for irrigation

6. The means of withdrawing such water from the ground and the location of each well or other means of withdrawal No. 1 is a spring and in free flowing year around and No. 2 has a cylinder pump with pump handle on at present with no power

7. The date of commencement and completion of the construction of the well, wells, or other works for withdrawal of groundwater No. 1 being a spring is in its natural flowing condition and has so existed from the beginning of time; No. 2 is an old well, in existence long prior to memory of appropriator.

8. The depth of water table No. 1 surface; No. 2 about 15 feet to water.

9. So far as it may be available, the type, size and depth of each well or the general specifications of any other works for the withdrawal of groundwater No. 1, natural spring; No. 2 is an old hand dug well to a depth of 20 feet and cased with rock (rocked out) and fitted with pump at present

10. The estimated amount of groundwater withdrawn each year: No. 1 will flow over 24 million gallons per year and No. 2 well has not been used in past few years, but it will

11. The log or formations encountered in the drilling of each well if available: none available

Describe means of obtaining groundwater without a well "as by sub-irrigation and other natural processes”. Include depth to water when applicable:

There are both natural flowing springs and both are good springs and run the year around. There is no accurate method of measuring the flow as they do not flow into tanks, but flow into a basin in the creek below and settle in the low spots and provide year round water for cattle. There is lots of water. Could handle 150 head year around. Quantity of water developed and used with explanation of method used to measure or estimate such amount. If use is intermittent estimate approximate lengths of periods of use.

See above for information. I estimate the spring in the SE 1/4 SW 1/4 Sec. 2, T. 51 N. R. 57 W. is sufficient to water 300 to 400 head of my cattle on a year around basis, and both wells develop a good amount of water steadily.
