Contractor (if any) .............................................................................
Address of Contractor ......................................................................

Date Started ........................................................................ Date Completed

Describe means of obtaining groundwater without a well "as by
sub-irrigation and other natural processes". Include depth to
water when applicable. All are springs.

Spring 1 is enclosed in concrete box
8 ft. by 8 ft. by 10 ft. deep. Springs 2 and 3 are enclosed
in boxes about 4 feet square and 6 ft. deep. Spring 6
is dug out and stored in a pond about 10 ft. in diameter,
and 10 ft. deep. Spring 7 is dug out and stored in a
pond about 50 ft. in diameter and 8 ft. deep.

Quantity of water developed and used with explanation of method
used to measure or estimate such amount. If use is intermittent
estimate approximate lengths of periods of use.

Spring 1 - 15000 gal. per day. Some excess runs off and is absorbed in the
pond. It is used for household use the year round.

Springs 2, 3, 4, and 5 - 15000 gal. per day, used in summer for
irrigation of garden and for stock water. Spring 6 - 30000 gal.
per day. Used year round for stock water usually
200 head of cattle. Capable of watering more. Some excess
runs off and is absorbed in the soil. Spring 7 - 15000 gal.
per day. Used for stock water, sometimes dried up in summer.
