Con't: All water entering well from cracks and seams in the rock below 280 feet.

Note: Wells in this area can be depended upon to produce clear sand-free water year after year as long as they are not overpumped, i.e., they should be pumped at rates not in excess of 40 to 50 percent of the tested capacity of the aquifer.

Water rises in well 89 feet from surface.
between six inch casing and eight inch hole is grouted from 40" to 60" back toward surface with six sacks of cement. Wells in this area can be depended upon to produce clear and free water year after year as long as they are not overpumped, i.e., they should be pumped at rates not in excess of 30 to 50 percent of the tested capacity of the aquifer.
