During the course of drilling, this well was drilled to 117 feet. Yield of well was then checked at 2 gallons per minute with static table rising to 80 feet.

Drilling commenced to 130 feet in search of more water. It was found that thin layers of gravel would yield an additional 3 gallons per minute. Casing was then extended to 128 feet with the bottom 3 feet of casing into soft clay.

When well was cleaned and developed, it was found that water would rise only to 101 feet to establish static level and could be heard trickling in at 100 feet from the upper strata.

This well has been sealed with water, sand, and clay from the surface down.
